

Paper Roses

step 1: print the following pages -double sided- on card stock for best look. Cut along spiral lines, flower will take a spiral shape.

step 2: starting on the outside, roll paper tightly into itself and continue until all is rolled up. Squeeze flower bud tightly a couple times to give it a realistic look. Hot glue base of bud and press flower firmly down to secure. Flower should be in tact and not loose.

step 3: Glue, one at a time, to your wreath board. Make sure to move in one direction, gluing flowers adjacent to one another as you go - rather than randomly around the board. It is more difficult to squeeze a flower into a space after the fact.
